

Senior Software Engineer - Full Stack

Join a growing healthcare informatics company! Agile environment

ReportingMD® is a population health management company committed to helping customers excel in an increasingly data centric and value focused environment. We deliver healthcare software and consulting services for pay-for-performance programs (like MIPS, PQRS, VBM), health data strategic planning, work flow analysis, health information technology, data risk adjustment, and data analysis and interpretation of health information statistics.

We are looking for a digital-technology enthusiast with a passion for software development and a proven track record of working with all layers of systems. You will design, develop, test, and deploy SaaS software products in an agile environment.

What you'll do:

- Design and develop the full stack of software development including UI, business logic and databases.
- Work on the database and backend tiers focusing on fault-tolerance and scalability in a multi-tenant enterprise environment.
- Maintain and improve the functionality and performance of the existing products; refactor legacy codebase.
- Participate in all stages of software development – from early brainstorming to coding, testing, and bug fixing.
- Help shape and execute the technical roadmap to develop next generation features and integrate product-level architecture principles and goals into the team's project work through designs, implementation strategies, and project sequencing.
- Write excellent, performant code and associated tests.

What you'll need:

- 7+ years of hands on experience in designing, developing, implementing, and maintaining multi-tier public facing web applications using Microsoft technology stack.
- Strong experience in developing code across the full stack – front end Web UI, middle tier service layer and back end database.
- Strong object-oriented analysis and design skills using C# as language.
- Strong experience in writing well designed, testable, efficient code components.
- Significant database knowledge and experience; including creating ERD, database objects such as tables, views, writing complex transact queries including stored procedures, functions, etc.
- Data warehouse experience with MS BI (SSAS, SSIS, and SSRS).
- Experience in responsive web – HTML5, CSS3, Bootstrap, and/or Angular JS.
- Strong experience in C#, .NET MVC, Microsoft Web API, REST, JSON, ORM (LINQ, Dapper or Entity Framework 6), Web Application Security (OWASP), and/or OAUT.
- Agile development methodologies (SCRUM, Continuous integration, Test driven)

ReportingMD®

- BS degree in Business, Computer Science, Engineering, Information Systems or related field (or equivalent experience).
- Excellent interpersonal, listening, verbal, and written communication skills.
- Ability to communicate technical details to technical and non-technical resources.
- Demonstrated ability to drive to deadlines, balancing multiple priorities, and ensuring quality standards.
- Excellent analytical, problem-solving, and innovative thinking skills.
- Healthcare industry experience preferred.

May consider visa sponsorship (H1B) if required.

No phone calls will be accepted. Professionals seeking employment only please.
